

Strong Artificial Intelligence

A Singularities

Change our Lives Massively

Prof. Dr. Dr. h. c. Robert Grebner

Technical University of Applied Sciences, Würzburg, 20.03.2026

Workshop „Singularities“

1. What is a singularity? Define!
2. Who makes singularities?
3. How are singularities made?
4. Why are singularities made?
5. Give examples of huge/primary singularities
6. Give examples of small/secondary singularities

A Singularities

1. Humans

The Crowning Glory of Creation

2. Machines

Creations of the Crowning Glory of Creation

3. Singularities

Creations Life Changer

4. Work

Creations Action

5. Work System

Collaboration

6. Strong Artificial Intelligence

Next Singularity?

7. *Conclusion*

Impact

1. Humans

What are Humans?

Working Individuals.

What are Humans Basically
Able to do?

Move & Think

What is a Humans Basic
Instinct?

Creativity, Simplify Work.

Are Humans Intelligent?

We Have Excellent Sensors,
Brains and Musculoskeletal
Systems.

2. Machines

What is a Machine?

Work Performer.

What Kind of Work can a
Machine Performe?

physical & mental

What Kinds of Machines
Exist?

Mechanic & Non-Mechanic

3. Singularities

4. Work

What is Work?

Things that have to be done.

What Types of Work Exist?

Physical & Mental

Chances of Work?

Division of Labor.

What Makes Work so Special?

It Connects People and Machines.

4. Work

Human Machine Matrix

Worker Work Type	Human	Machine
physical	 A photograph showing two men on a red-tiled roof. One man in the foreground is smiling and wearing a green cap and a white t-shirt. Another man in a blue shirt and jeans stands further back on the roof. Residential houses are visible in the background.	 A photograph of a large, complex industrial machine, possibly a piling rig or a large crane, situated on a road or construction site. The machine has a large circular cutting head and a tall lattice structure. A road with a red car is visible in the foreground.
mental	 A photograph of a man wearing safety glasses and a white shirt with a red tie, leaning over a desk with two computer monitors. He appears to be working or presenting.	 A photograph of an older man in a suit sitting at a large table, working on a complex, detailed model of a building or infrastructure project. The model is made of metal rods and is housed in a glass enclosure.

$$(3+7) / 2 \times 1,5 =$$

4. Work

Calculating Machine: Worlds First Universal Computer

Konrad Zuse behind the replica of Z1 in the „Deutsches Technik Museum“ in Berlin (Z1: 1936-1938)

4. Work as Connecting Medium

5. Work System

6. Strong Artificial Intelligence

6. Strong Artificial Intelligence: Thinking Machine

B Intelligence

C Reality

D Time and Space

E Information and Knowledge

F Action

G Conceptualisation

7. Conclusion

1. By thinking machines (TM) robots will become a **mass phenomenon**
2. Construction and application of robots on a huge scale has the potential, to pocket the automotive sector:
Automotive industry → robomotive industry
3. The demand of roboticists (robotics engineers) and dependend professions in this industry will increase dramatically → generation of new employment
4. Regions of advantageous preconditions, which recognize and organise early, will benefit most → ecosystem is going to be build

7. Conclusion: Robomotive Ecosystem Mainfranken
